# Steps to view EC2 instance logs on Kibana
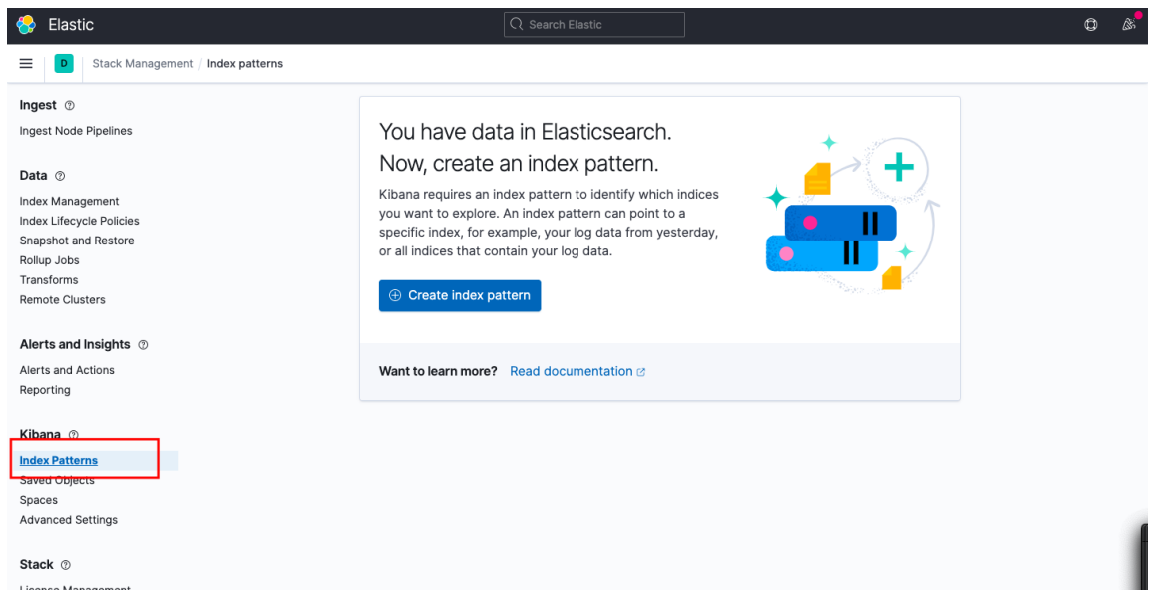

1. Login to Kibana dashboard using following url **http://<your-elk-ip-address>:5601** You will see following dashboard

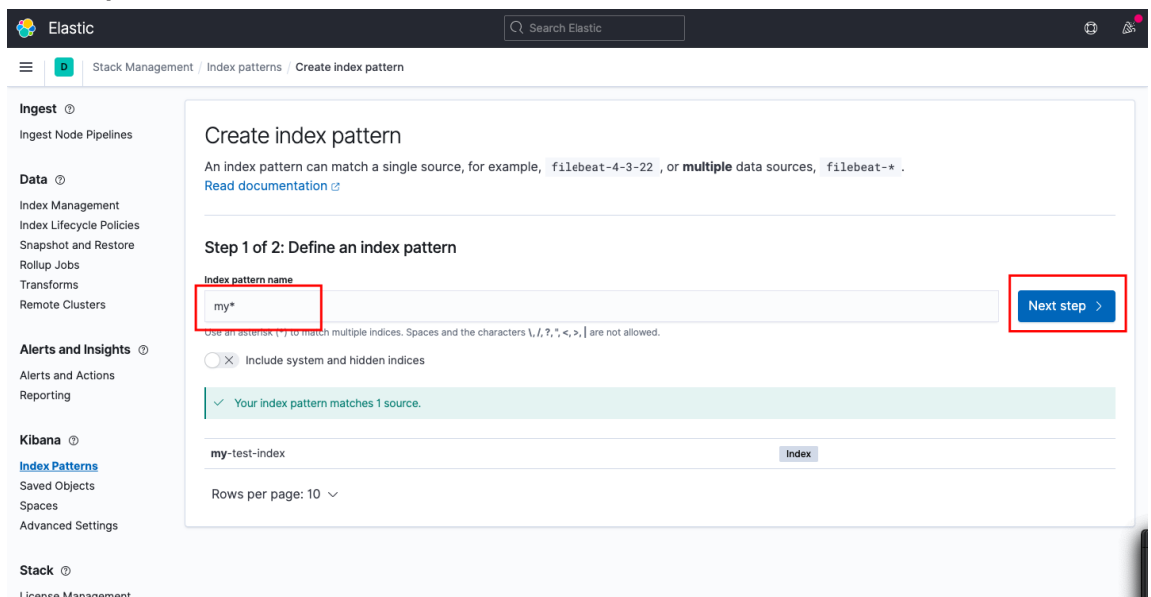

2. Click on top right menu button and click on **Stack Management** link as highlighted

3. Click on **Index Patterns** link under **Kibana**

4. Click on **Create index pattern** button and add **my*** as Index pattern name and click **next step**

5. Select **Timestamp** and click **Create Index pattern**

6. Now click on the menu button on top right corner and click **Discover** under **Kibana**

7. This setup will show logs in the kibana dashboard, check `agent.hostname` field to verify the ip address
